Key words. techniques: high angular resolution – methods: observational – stars: AGB and post-AGB – circumstellar matter – stars: evolution – errata, addenda

It has come to our attention that further clarification is needed with respect to Fig. 2 and Sect. 3.1 in the original published version of this article (Lykou et al. 2015). The correction is related to a citation made in Sect. 3.1 to the work of Meisner (2008) and the method used to derive the angular sizes presented in Fig. 2, which may confuse the reader. Our results, as presented in Fig. 2 and Sect. 3.1, were derived with a method independent of the one of Meisner (2008). The citation should be modified to J. Meisner (priv. comm.). This clarification does not modify the overall direction of our work.

Acknowledgements. We thank Dr. Jeff Meisner for pointing out this inconsistency, for many fruitful discussions on optical interferometry and for providing the reduced VINCI visibilities.
